

# Kumbara by Sembol

• TESTNET

Dollar savings for people paid in lira. One tap.

Live · Stellar TESTNET

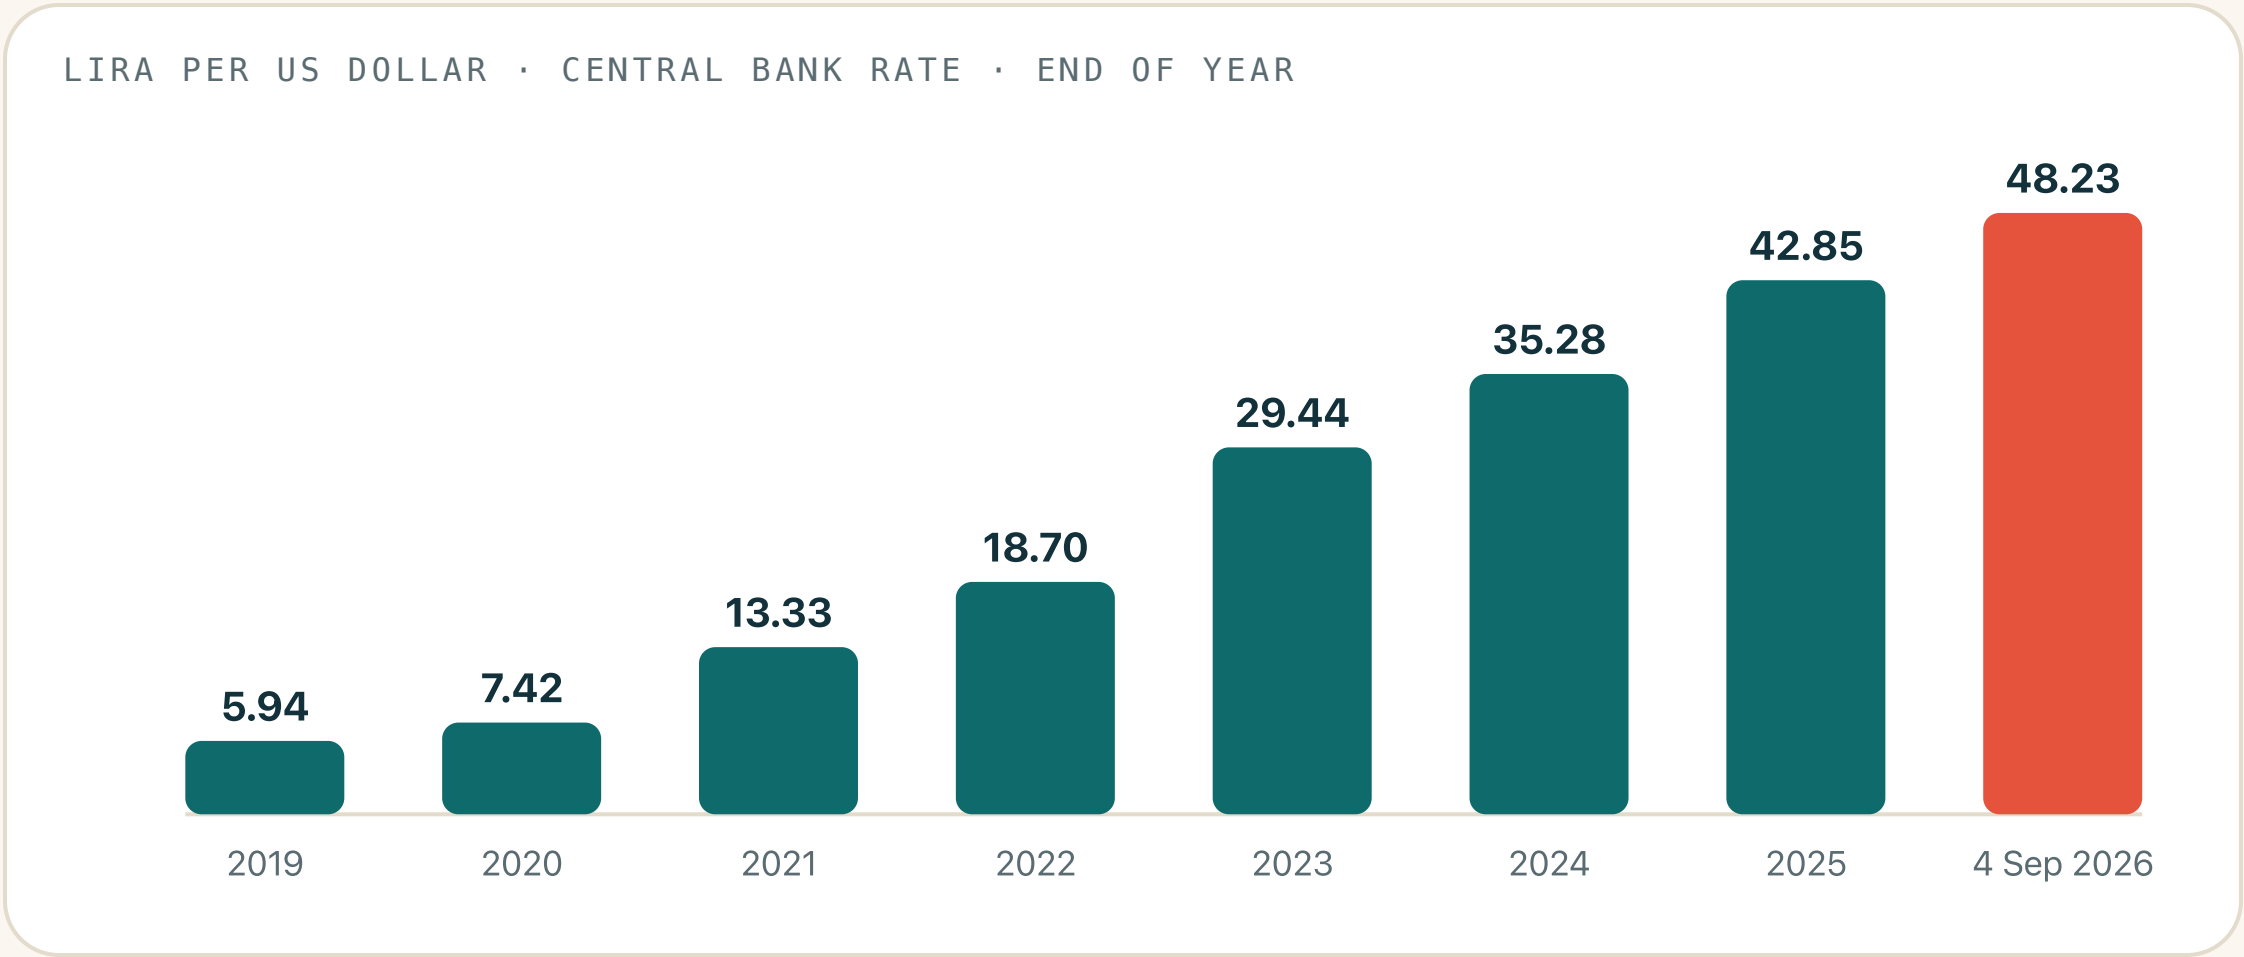

**kumbara.sembol.xyz**

Repository

**github.com/keyboard01/kumbara**

PROBLEM

# A lira in the bank buys less.

8.1x

lira per dollar since end-2019

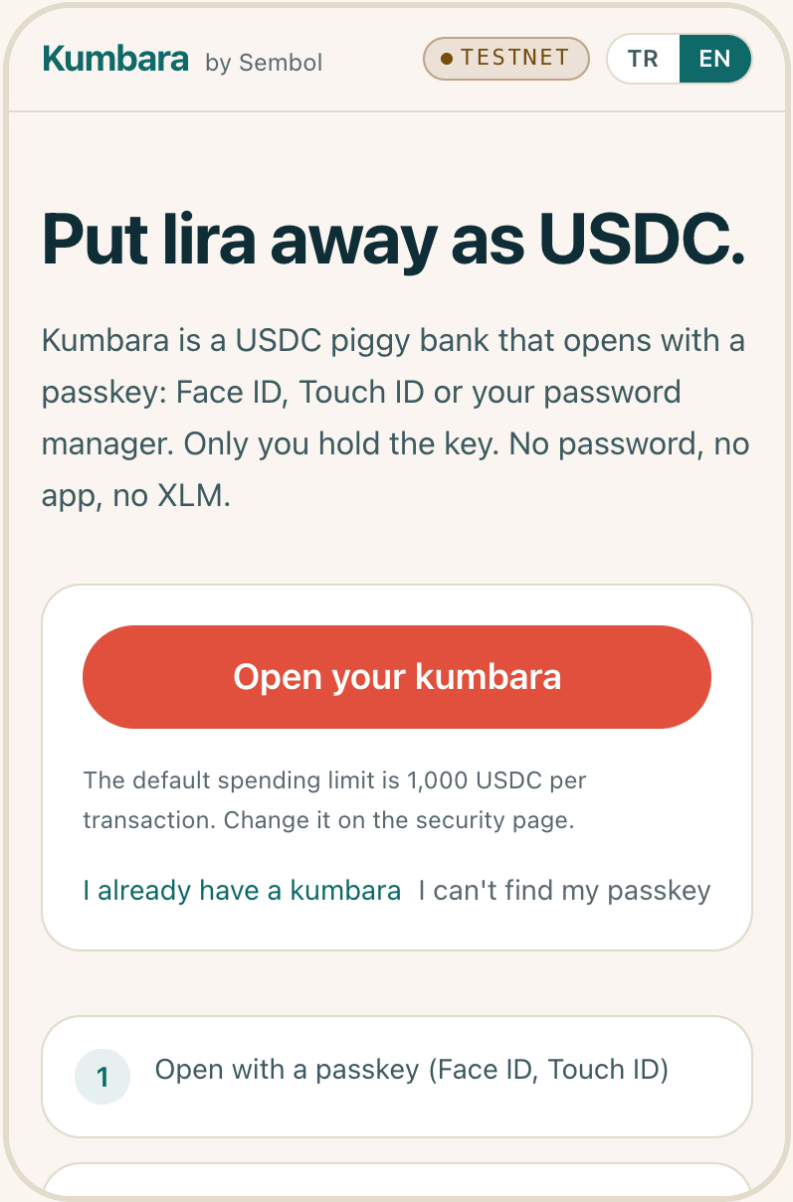

31.5%

inflation, August 2026

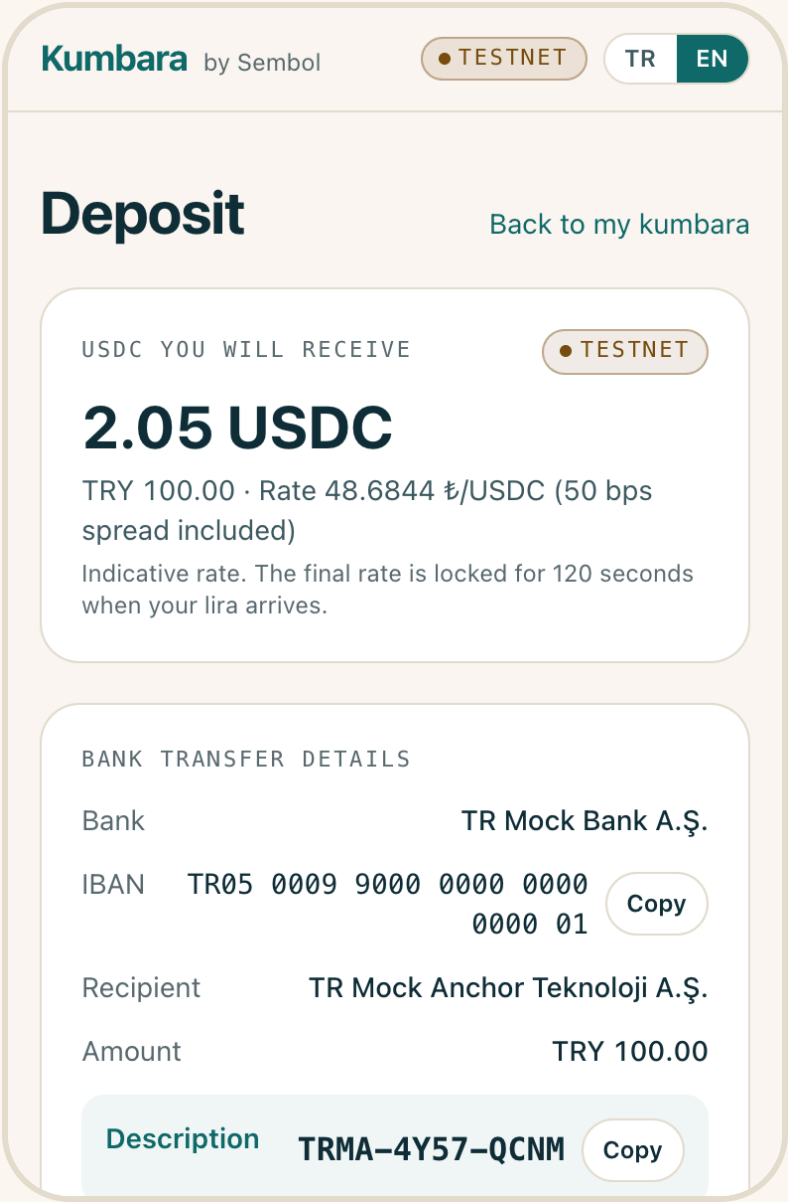

₺100,000 since 2019 → **\$2,073** as lira, **\$16,835** as dollars.

TCMB indicative USD buying rate, last business day of each year and 4 September 2026 (tcmb.gov.tr/kurlar) · TÜİK CPI, August 2026, +31.51% year on year (veriportali.tuik.gov.tr/tr/press/58290) · dollar figures are ₺100,000 divided by those rates.

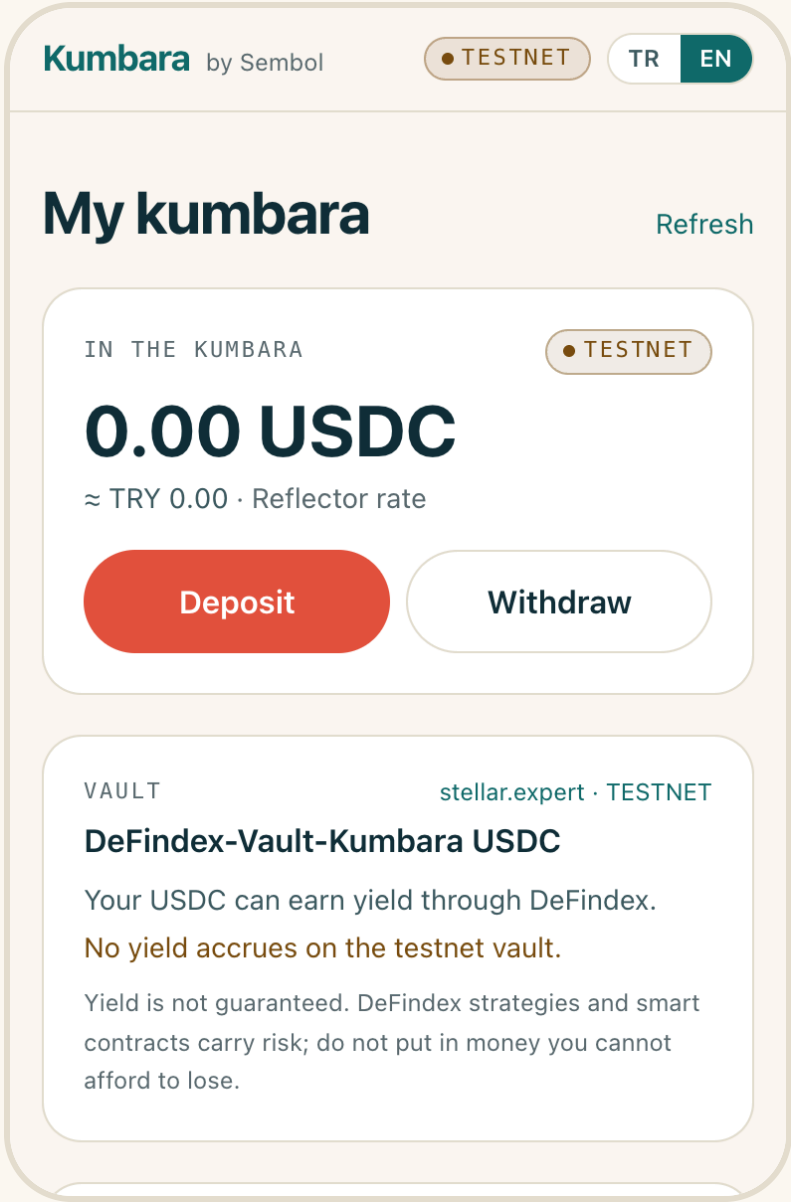

# Tap once. Save in dollars.

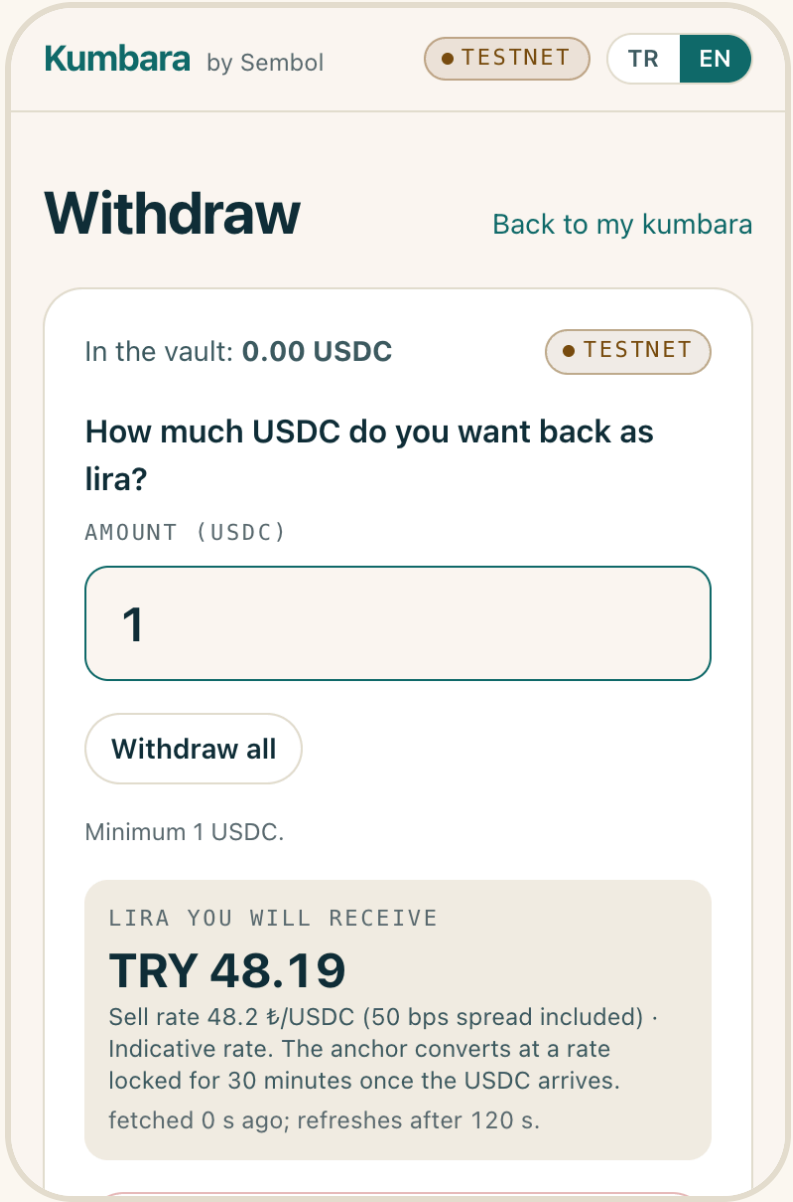

Tap once

Transfer lira

Held as USDC

Lira back

WHY IT IS BETTER

# Self-custody without the homework.

|                     | WHO HOLDS YOUR MONEY | NO SEED PHRASE | NO XLM TO BUY | LIRA IN AND OUT BY BANK TRANSFER | NOTHING TO INSTALL |
|---------------------|----------------------|----------------|---------------|----------------------------------|--------------------|
| Bank dollar account | bank                 | ✓              | ✓             | ✓                                | ✓                  |
| Crypto exchange     | exchange             | ✓              | ✓             | ✓                                | ✗                  |
| Seed-phrase wallet  | you                  | ✗              | ✗             | ✗*                               | ✗                  |
| Kumbara             | you                  | ✓              | ✓             | ✓                                | ✓                  |

\* Depends on the wallet's anchor support.

# Five moves, one tap.

Passkey opens account

Spending limit on-chain

Anchor issues IBAN

Bridge forwards USDC

One tap, vault

Anchor  
pays a normal account

USDC

Temporary account  
two pre-signed transactions

forward,  
then close

Your kumbara  
smart account

payment 778215b3...

forward f580e030...

close 6223c61c...

The anchor can only pay a normal Stellar account, not a smart account.

So we create a temporary account whose only two possible transactions are signed before any money arrives: forward the USDC to your kumbara, then close itself.

Nobody, including us, can ever redirect it.

**No custody, no trust in us.**

WHERE IT WORKS

# Same app, next anchor.

| MARKET    | INFLATION     | ANCHOR ON THE SCF INTEGRATION LIST                                     |
|-----------|---------------|------------------------------------------------------------------------|
| Türkiye   | 34.9% (2025)  | Sandbox anchor today over SEP-6; a licensed TRY anchor is the go/no-go |
| Argentina | 219.9% (2024) | Koywe · API in 1–2 weeks (published)                                   |
| Bolivia   | 19.5% (2025)  | Koywe · API in 1–2 weeks (published)                                   |

Before mainnet we pick the anchor: licensed, pays your own bank account, confirms in writing that a non-custodial app can integrate. Türkiye if a TRY anchor qualifies; otherwise Argentina on Koywe. Same app either way.

Inflation: World Bank, consumer prices, annual %, 2025 (Argentina 2024, latest published). Anchors and integration times as published on the SCF Integration List, on/off-ramping section, read 6 September 2026.

Rise In × Stellar Pro, 19–20 September: these become the booth numbers.

# Non-custodial software. The anchor is the regulated party.

- We never hold lira, USDC or keys.
- The anchor holds fiat and does KYC. We build on the anchor's KYC and run none ourselves.
- No send, no P2P, no merchant flow.
- Per-transaction cap on-chain; anchor-side limits.

BEFORE MAINNET

The anchor confirms in writing it can serve a non-custodial app.

**No confirmation, no launch.**

## TEAM

# Three engineers, already shipping on Stellar.

AM

### Ahmed Murshed

Founder and lead engineer

- Full-Stack Engineer at Synchronicity: trading client of a private perpetuals DEX, Go/Rust execution work
- Author of @sembol/passkey-react; contributor to stellar/smart-account-kit; Instaward grantee
- Ex Development Lead, YTU Blockchain Club
