

Kumbara by Sembol

• TESTNET

Dollar savings for people paid in lira. One tap.

Live · Stellar TESTNET

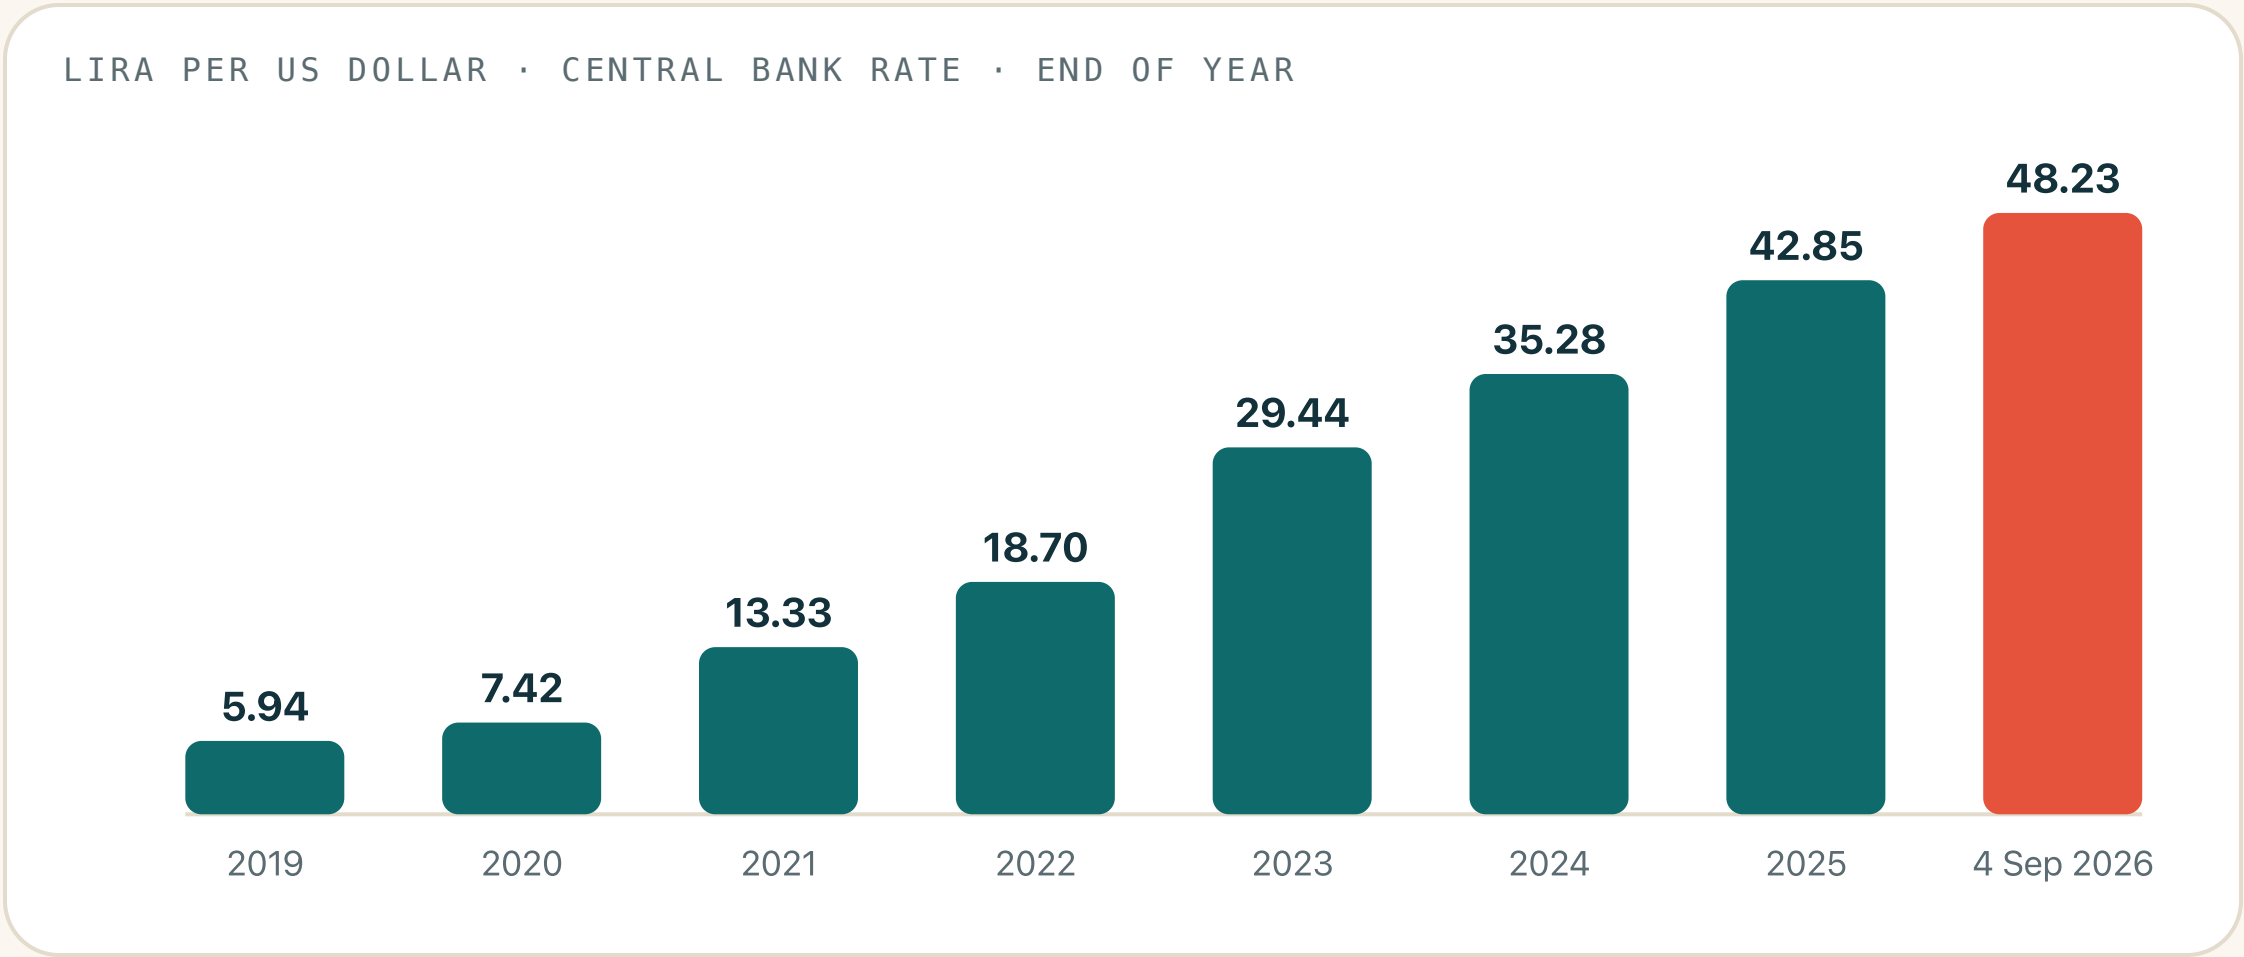

kumbara.sembol.xyz

Repository

github.com/keyboard01/kumbara

PROBLEM

A lira in the bank buys less.

8.1x

lira per dollar since end-2019

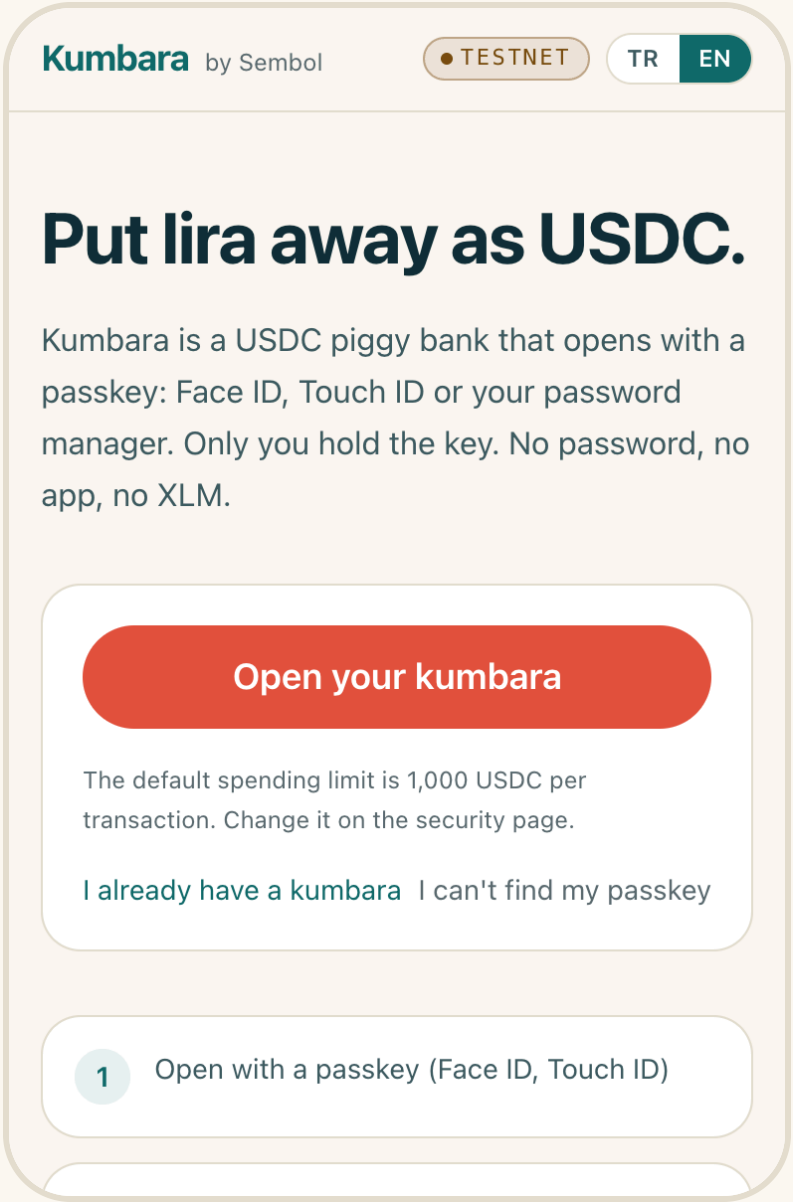

31.5%

inflation, August 2026

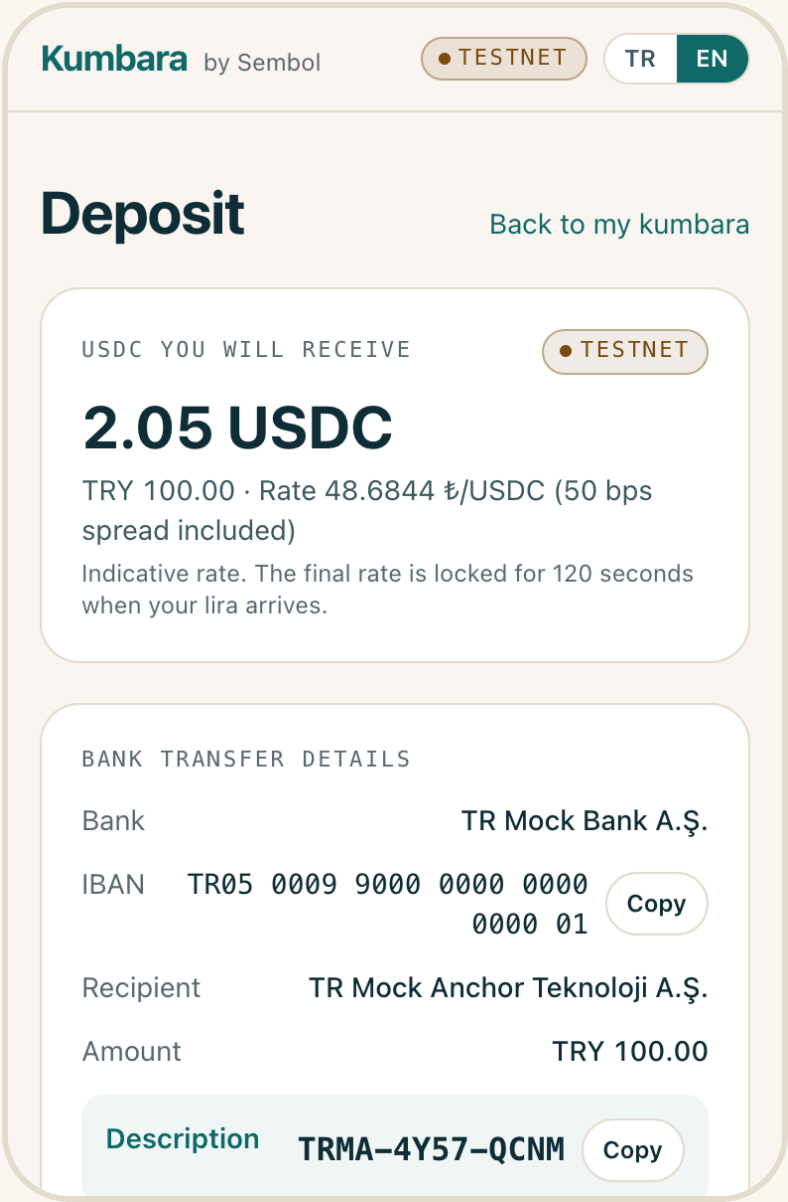

₺100,000 since 2019 → **\$2,073** as lira, **\$16,835** as dollars.

TCMB indicative USD buying rate, last business day of each year and 4 September 2026 (tcmb.gov.tr/kurlar) · TÜİK CPI, August 2026, +31.51% year on year (veriportali.tuik.gov.tr/tr/press/58290) · dollar figures are ₺100,000 divided by those rates.

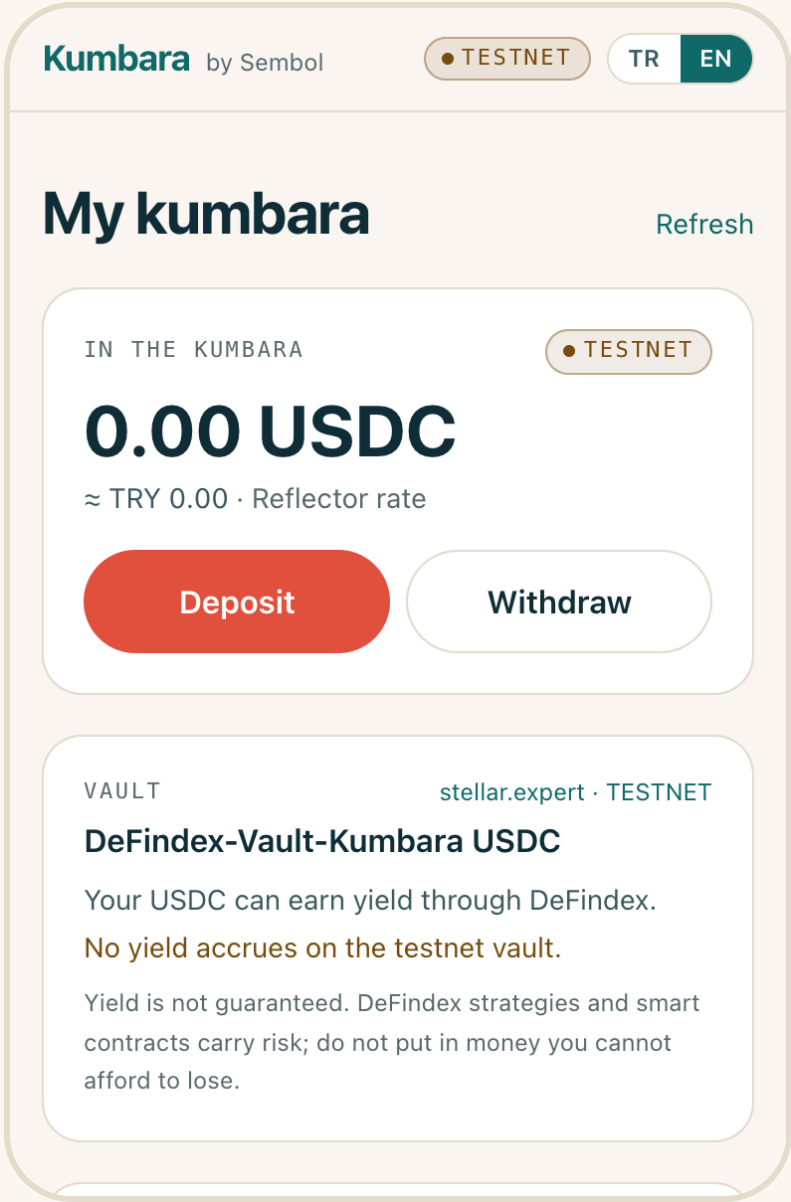

Tap once. Save in dollars.

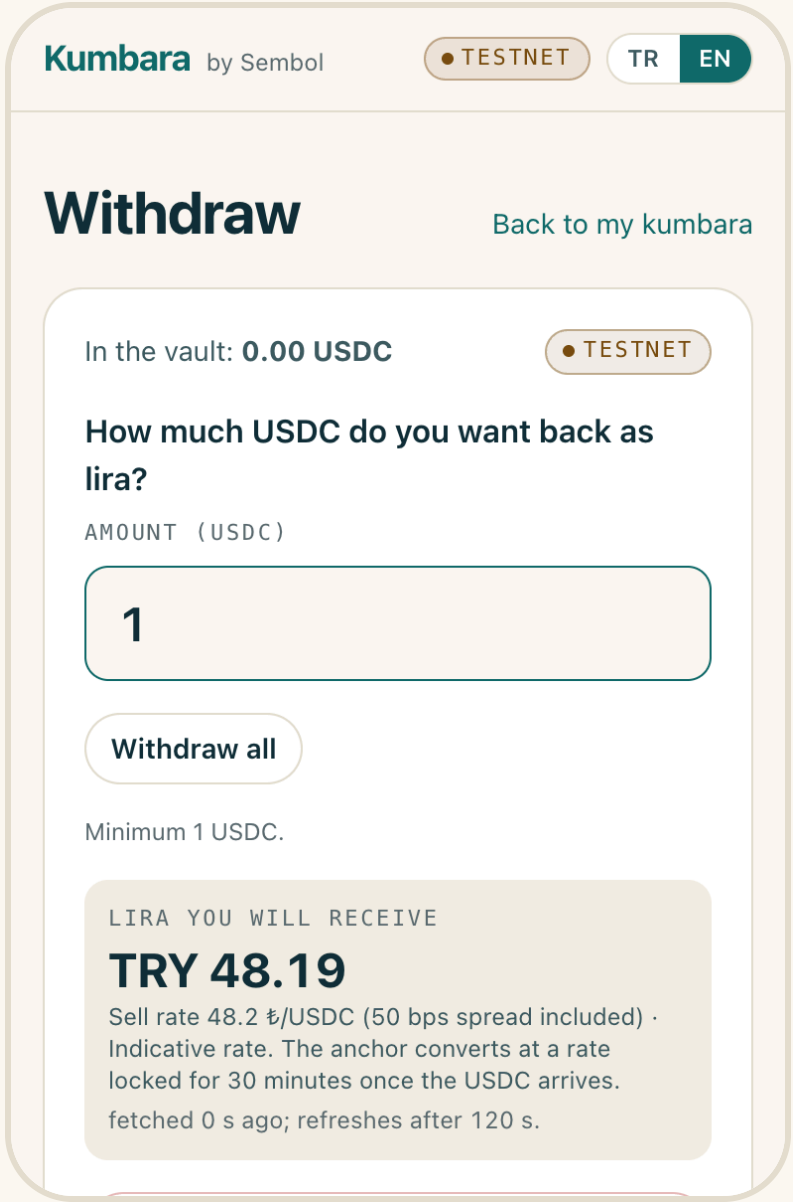

Tap once

Transfer lira

Held as USDC

Lira back

WHY IT IS BETTER

Self-custody without the homework.

	YOU HOLD THE KEY	NO SEED PHRASE	NO XLM TO BUY	LIRA IN AND OUT BY BANK TRANSFER	NOTHING TO INSTALL
Bank dollar account	✗	✓	✓	✓	✓
Crypto exchange	✗	✓	✓	✓	✗
Seed-phrase wallet	✓	✗	✗	anchor by anchor	✗
Kumbara	✓	✓	✓	✓	✓

You hold the key. No homework.

Five moves, one tap.

Passkey opens account

Spending limit on-chain

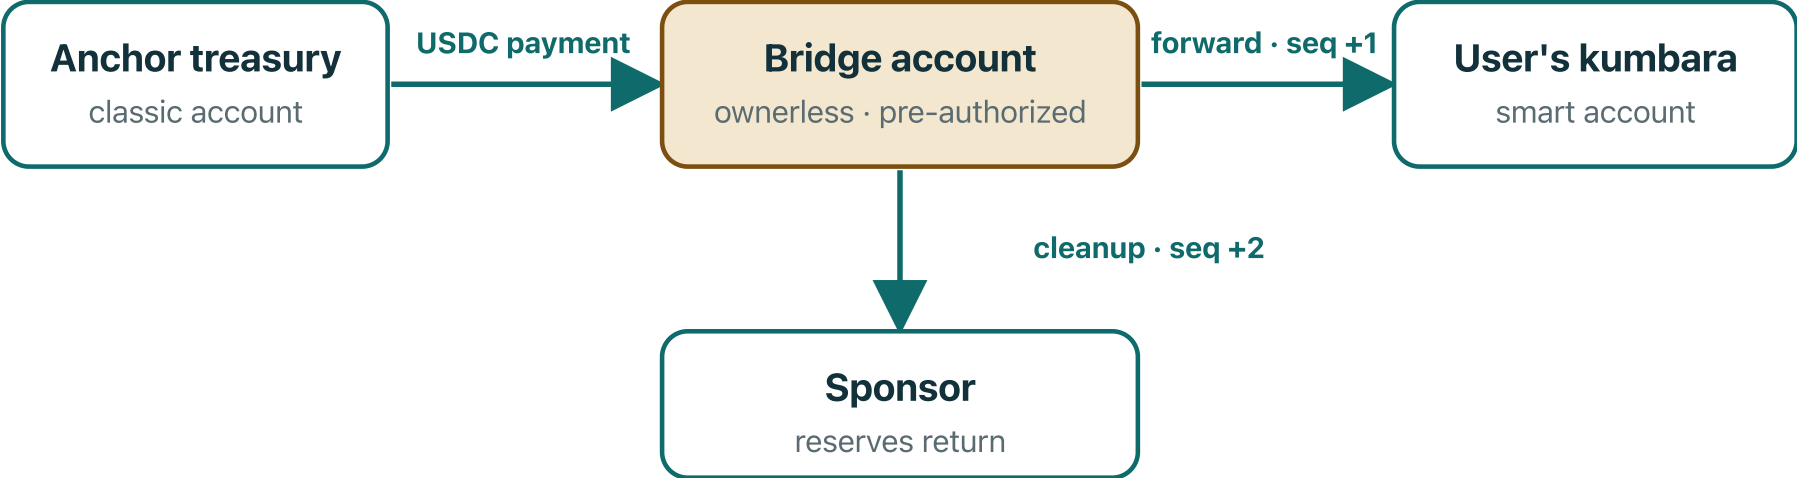

Anchor issues IBAN

Bridge forwards USDC

One tap, vault

```
graph LR; A["Anchor treasury<br/>classic account"] -- "USDC payment" --> B["Bridge account<br/>ownerless · pre-authorized"]; B -- "forward · seq +1" --> C["User's kumbara<br/>smart account"]; B -- "cleanup · seq +2" --> D["Sponsor<br/>reserves return"]
```

Anchors pay classic accounts, so a throwaway pre-authorized bridge account carries the USDC into the smart account.

10/10
exact amount matches

payment 778215b3...

forward f580e030...

cleanup 6223c61c...

WHERE IT WORKS

Same app, next anchor.

MARKET	INFLATION	ANCHOR ON THE SCF INTEGRATION LIST	PUBLISHED INTEGRATION TIME	FIT
Türkiye	34.9% (2025)	sandbox today; licensed TRY anchor = Tranche 1 go/no-go	—	market one
Argentina	219.9% (2024)	Koywe	widget < 1 day · API 1–2 weeks	strong fit
Bolivia	19.5% (2025)	Koywe	widget < 1 day · API 1–2 weeks	strong fit
Nigeria	23.0% (2025)	none by country; global ramps to verify	BlindPay, Mercuryo 1–2 weeks · Bridge 1–5 days	to verify
Egypt	14.1% (2025)	none by country; global ramps to verify	BlindPay, Mercuryo 1–2 weeks · Bridge 1–5 days	to verify
Colombia	5.1% (2025)	Koywe	widget < 1 day · API 1–2 weeks	low inflation

The anchor is config, not code.

Inflation: World Bank, consumer prices, annual %, 2025 (Argentina 2024, latest published). Anchors and integration times as published on the SCF Integration List, on/off-ramping section, read 6 September 2026. Türkiye runs on a sandbox anchor today.

EVIDENCE

Built, tested, public.

6

real-browser round trips in CI,
every push and every 6 h

25

failure states, each a TR/EN
screen

Non-custodial software. The anchor is the regulated party.

- We never hold lira, USDC or keys.
- The licensed anchor holds fiat, does KYC, pays only your own IBAN.
- No send, no P2P, no merchant flow. Türkiye's 2021 payments ban respected.
- Per-transaction cap on-chain; MASAK limits at the anchor.
- Outside Türkiye's CASP definitions: no custody, no trading, no transfer service by us; the user signs with their own key. *Our reading, to be confirmed with the anchor's compliance team.*

GATE BEFORE MAINNET

The anchor's written position.

FALLBACK

Top-ranked market on the SCF list, same app.

TEAM

Founder-led, already shipping on Stellar.

Upstream PR merged

stellar/smart-account-kit #4, merged 19 August 2026, shipped in 0.6.2

npm package

@sembol/passkey-react: passkey creation and signing, recovery, spending-limit UI

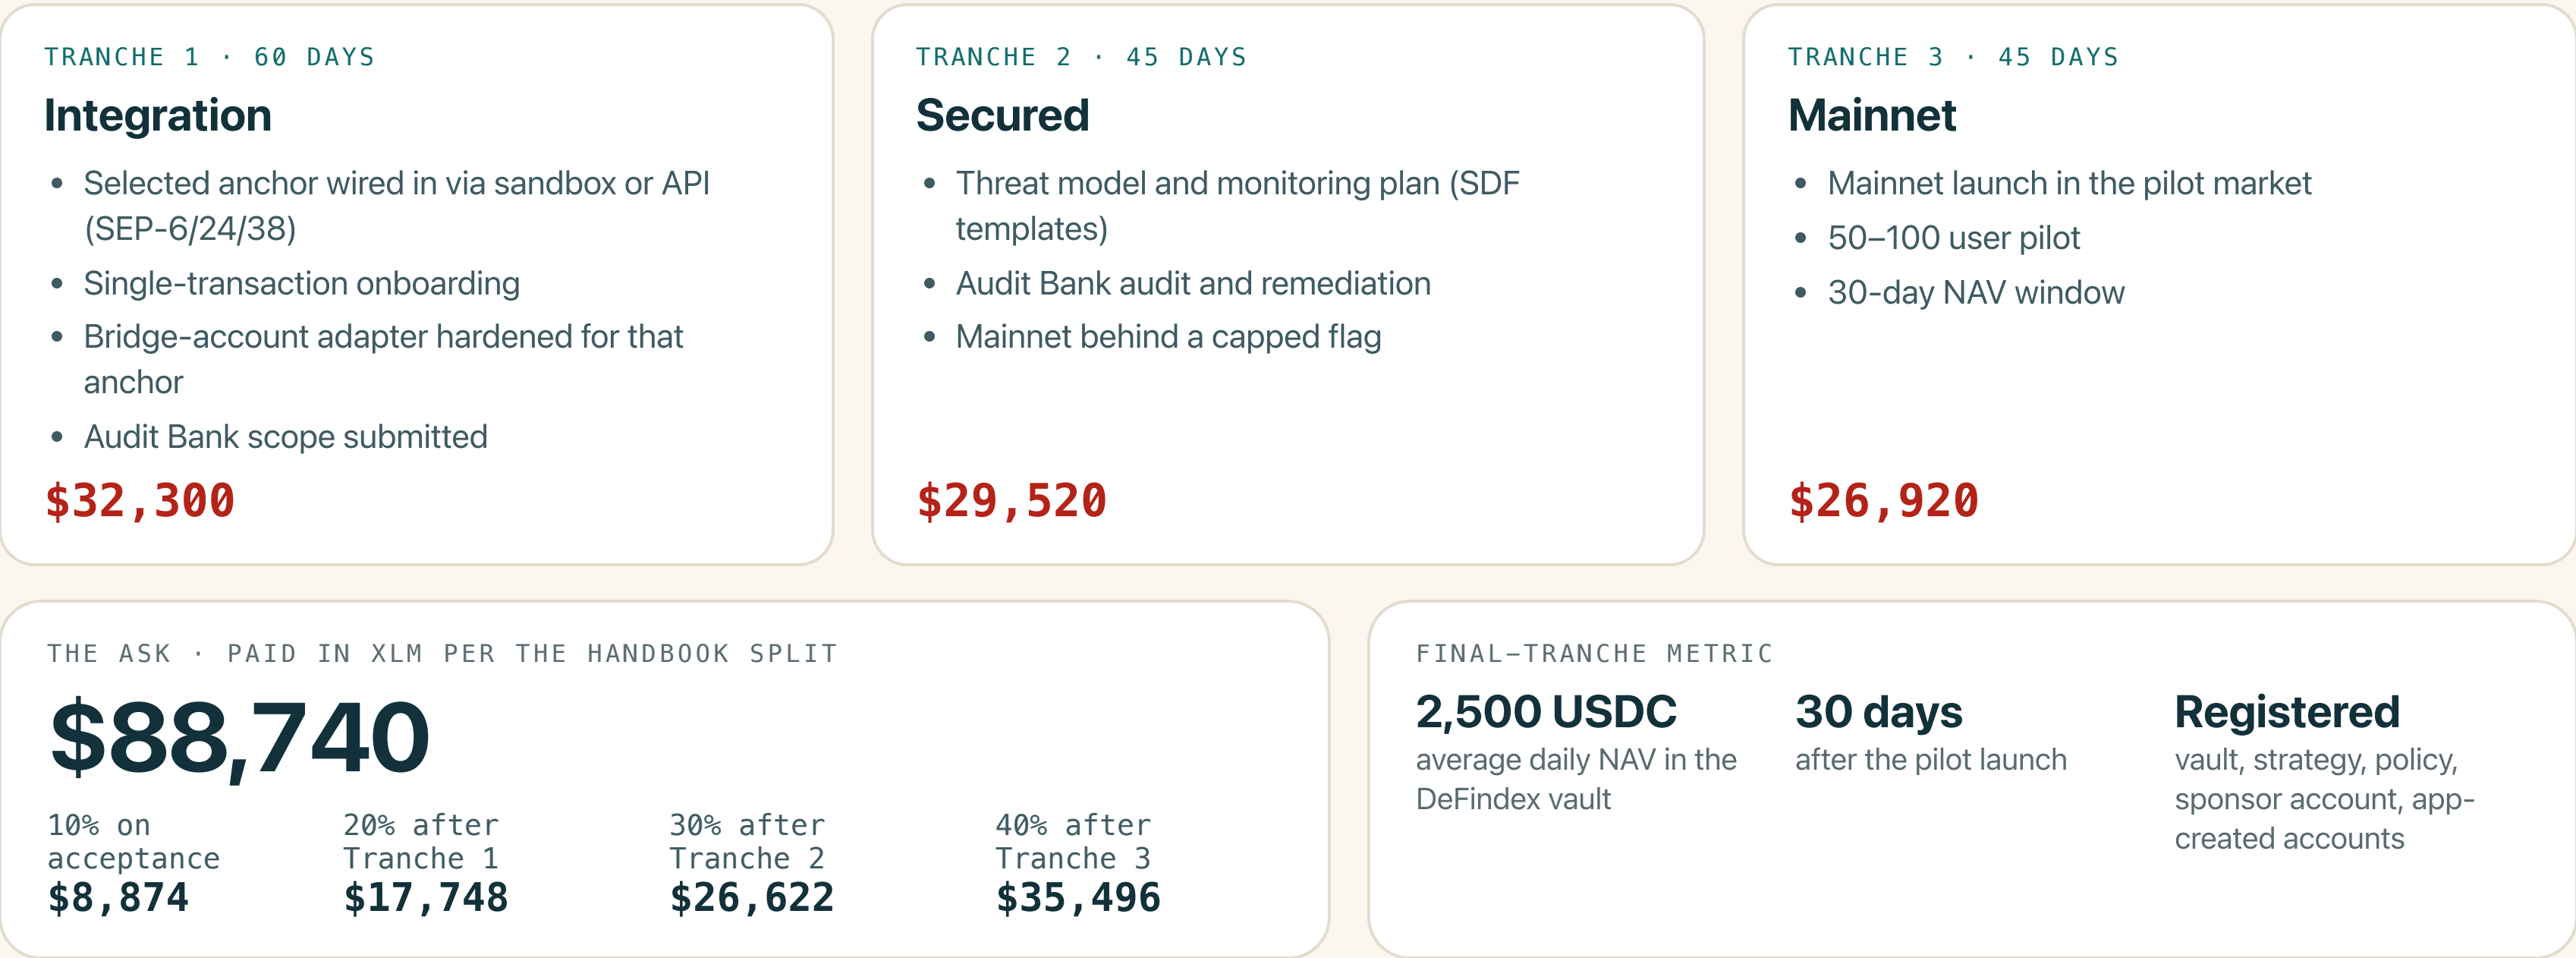

Instaward grantee

Stellar Türkiye. Kumbara is the consumer proof for that work.

Ahmed. Two engineers planned on award; no deliverable depends on a hire.

ahmed.bet · linkedin.com/in/ahmed-zm · github.com/keyboard01

Three tranches, five months, mainnet.

Sembol Cloud v0 and the 0.4.0 release are delivered under Instaward Month 3; nothing here overlaps. Payment split: SCF Handbook, Build Award, Budget & Deliverable Guidelines. The panel ratifies or adjusts the metric threshold.

DELIVERABLE	HOURS	USD	VERIFICATION
T1 Selected anchor wired in through its sandbox or API in place of the mock (SEP-6/24/38)	130	\$12,350	sandbox round trip green in CI
T1 Single-transaction onboarding: spending-limit policy on the default rule at creation	90	\$8,550	one tx hash per new kumbara
T1 Bridge-account adapter hardened for that anchor: matching, retries, cleanup guarantees	80	\$7,600	10/10 matches on the new anchor; unit tests
T1 Audit Bank scope submitted: policy install, bridge accounts, server path	20	\$1,900	submission confirmation
T1 Deployment docs and CI against the anchor sandbox	20	\$1,900	fresh deploy from the docs; CI run
T2 Threat model, SDF STRIDE template	50	\$4,750	docs/security/threat-model.md
T2 Monitoring plan, SDF builders template; core alerts live	60	\$5,700	monitoring-plan.md; a live alert
T2 Dashboards and alert routing (optional)	40	\$2,600	dashboard URL; a routed alert
T2 Audit Bank audit: scoping, support, remediation with regression tests	96	\$9,120	audit report; fix commits; re-check
T2 QA against the audit findings	40	\$2,600	QA report; CI suite
T2 Mainnet behind a capped, presenter-only flag	50	\$4,750	mainnet tx hashes from the capped path
T3 Mainnet launch in the pilot market: contracts registered, sponsor and relay configured	90	\$8,550	mainnet contract IDs on stellar.expert
T3 50–100 user pilot with validation-focused testing	56	\$5,320	/stats on mainnet; cohort report
T3 User-testing ops: sessions, interviews, write-ups	40	\$2,600	session log; cohort report
T3 On-call runbook; monitoring live on mainnet	40	\$3,800	runbook; a mainnet alert and its ticket
T3 30-day NAV window: measurement, dashboard, footprint registered	30	\$2,850	NAV dashboard URL; registered IDs
T3 Pilot support: triage, fixes, weekly reports	40	\$3,800	issue log; weekly reports
Total · 150 days	972	\$88,740	T1 \$32,300 · T2 \$29,520 · T3 \$26,920

Rates: \$95/h engineering; \$65/h QA and user-testing support (grey rows). Tranche lengths: 60, 45, 45 days.
