

Kumbara by Sembol

• TESTNET

Dollar savings for people paid in lira. Bank transfer in, USDC in a vault, lira back out. A passkey is the only key.

PROBLEM

A lira in the bank buys less every year.

8.1x

the lira price of a dollar since end-2019

31.5%

consumer inflation, August 2026, TÜİK

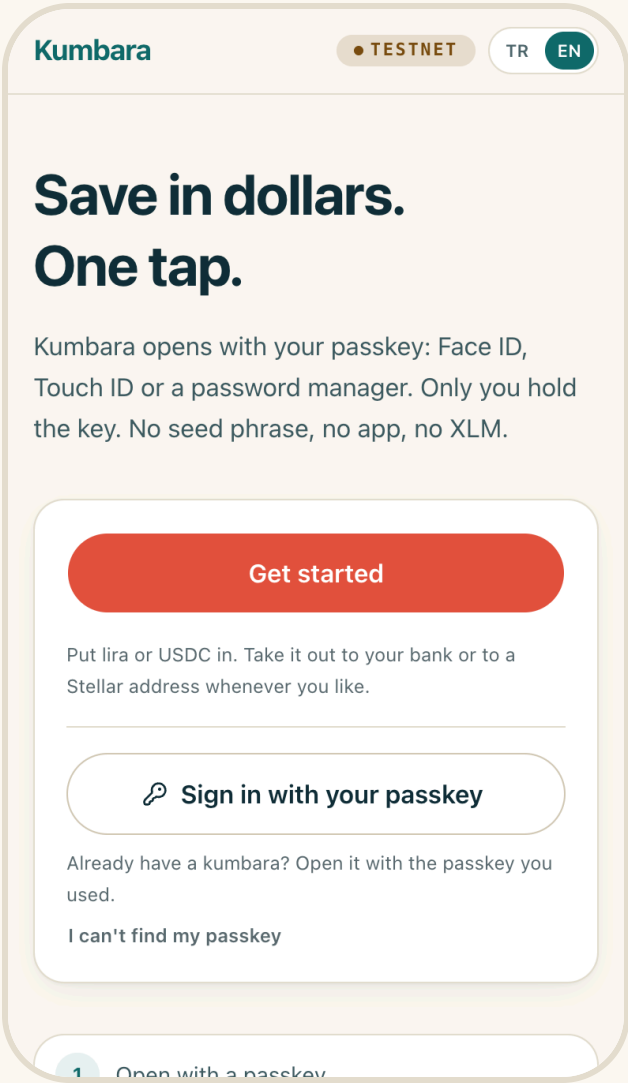

₺100,000 kept as lira since 2019 buys
\$2,073 today. Kept as dollars: **\$16,835**.

The dollar route today: an exchange app, a seed phrase, XLM for fees. Most people stop there.

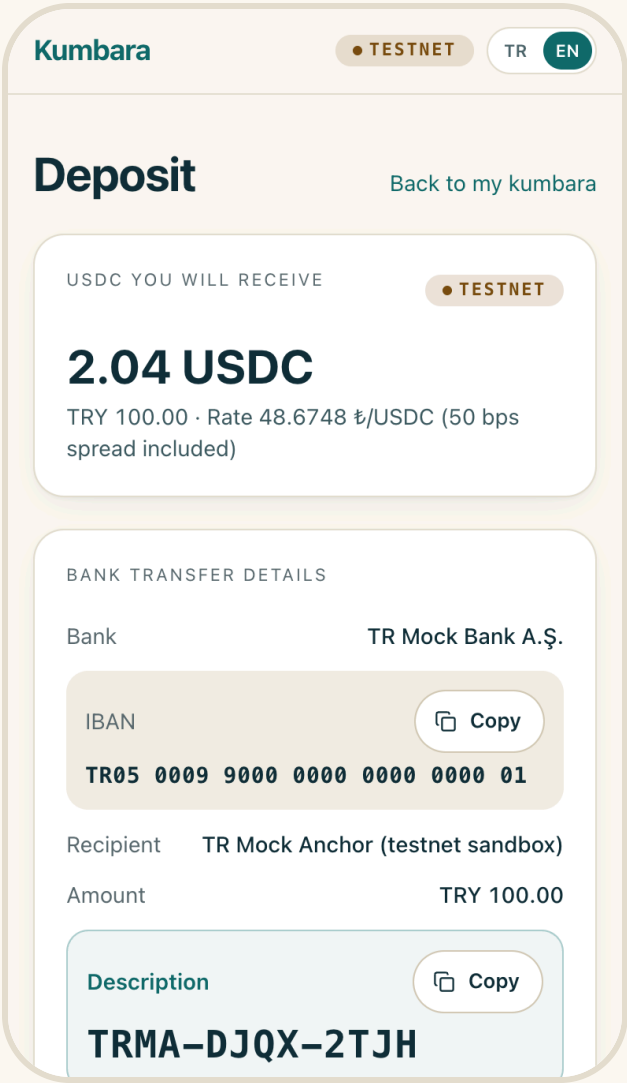

Sources: TCMB indicative USD buying rate, last business day of each year and 4 September 2026 (tcmb.gov.tr/kurlar); TÜİK consumer price index, August 2026, +31.51% year on year (veriportali.tuik.gov.tr/tr/press/58290). Dollar figures are the lira amount divided by those rates.

HOW WE SOLVE IT

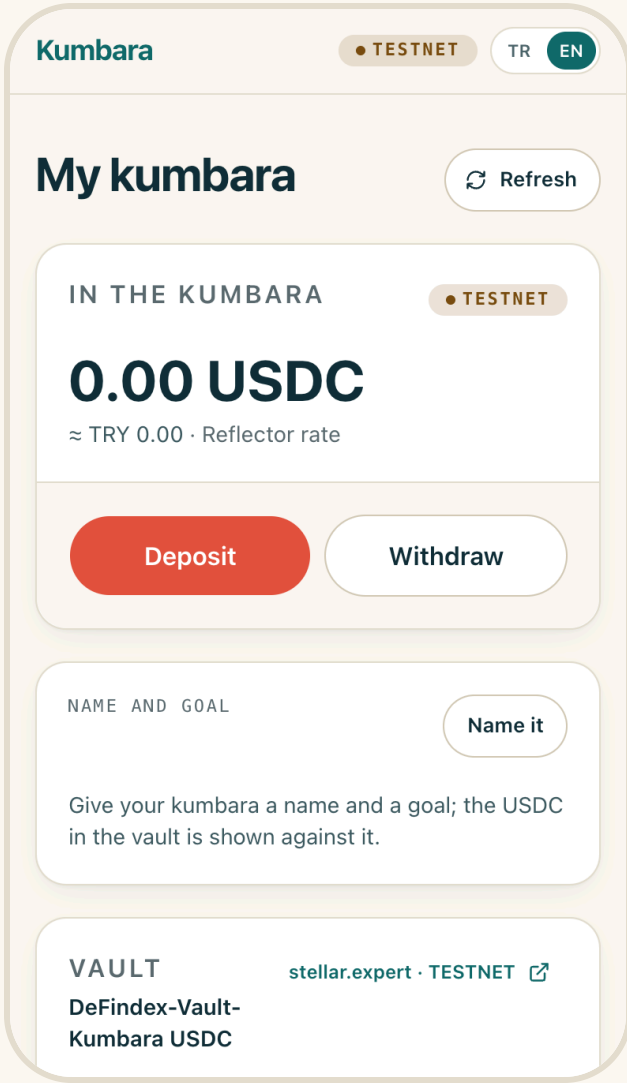

Tap once. Transfer lira. Save in dollars.

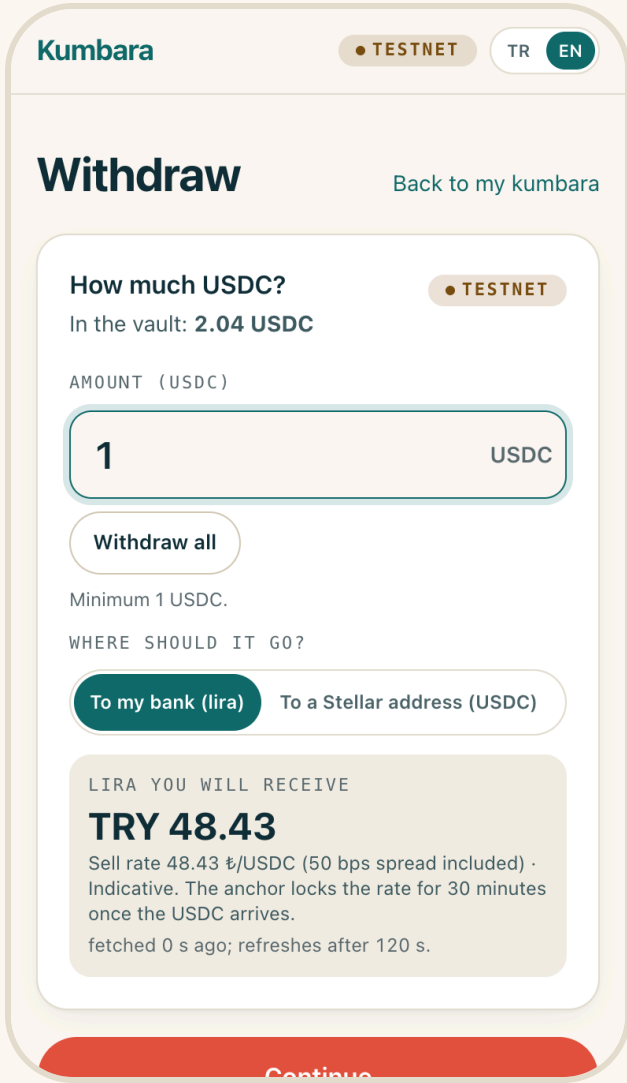

Tap once. A passkey makes the key. No seed phrase, no XLM, no app.

Put money in by bank transfer, or send USDC to your kumbara's address.

Held as USDC in a DeFindex vault. Only you hold the key.

Take it out to your own IBAN as lira, or to a Stellar address as USDC.

Scan, tap once, and you have a kumbara before this slide is over.

kumbara.sembol.xyz • TESTNET

1. Scan the code (it opens the app with this booth's reference).
2. Tap **Get started**, approve with Face ID or Touch ID. Your smart account deploys; the relay pays.
3. Tap **Deposit**, enter 100. The presenter plays the bank; a minute later the USDC is in the vault.
4. Tap **Withdraw**: lira comes back to the IBAN; the payout reference shows in under a minute.

Opens in English; Türkçe is one tap away at the top. iPhone: Safari, not private browsing. Android: Chrome with a screen lock. The counter on kumbara.sembol.xyz/stats moves as you go.

WHY IT IS BETTER

Self-custody without the crypto homework.

	WHO HOLDS YOUR MONEY	NO SEED PHRASE	NO XLM TO BUY	LIRA IN AND OUT BY BANK TRANSFER	NOTHING TO INSTALL
Bank dollar account	bank	✓	✓	✓	✓
Crypto exchange	exchange	✓	✓	✓	✗
Seed-phrase wallet	you	✗	✗	✗*	✗
Kumbara	you	✓	✓	✓	✓

* Depends on the wallet's anchor support.

Five moves, one tap.

- 1

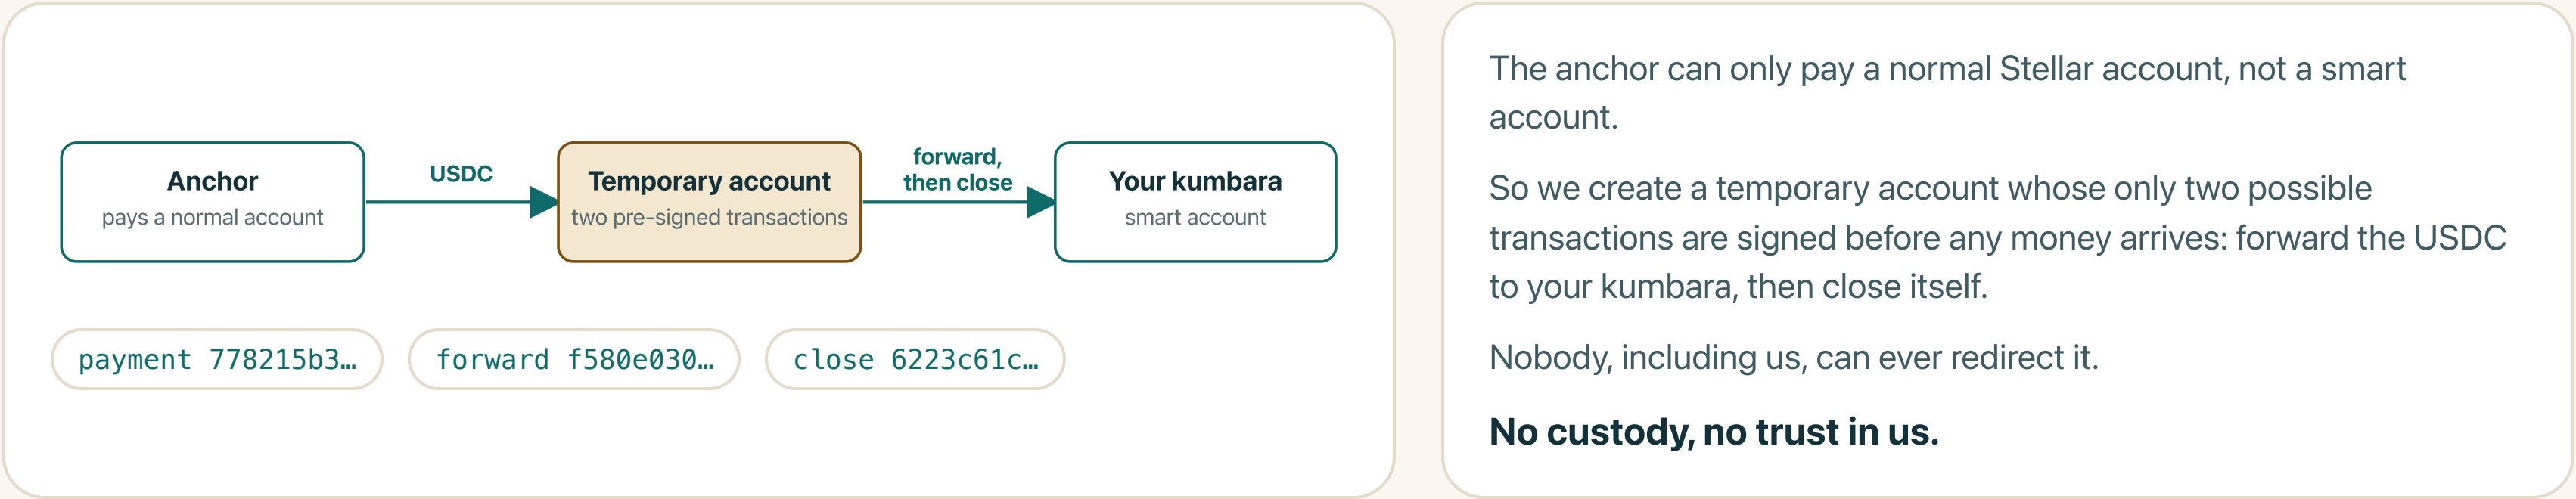

Passkey → OpenZeppelin smart account. The relay pays the fees.
- 2

A 1,000 USDC per-transaction limit, written on-chain at the first withdrawal.
- 3

The anchor gives an IBAN over SEP-6. Lira in, USDC out.
- 4

A temporary account forwards the USDC to your kumbara and closes itself.
- 5

One approval puts it in the DeFindex vault. Withdrawal runs backwards.

WHERE ELSE IT WORKS

Same app, next anchor.

MARKET	INFLATION	ANCHOR ON THE SCF INTEGRATION LIST
Türkiye	34.9% (2025)	Sandbox anchor today over SEP-6; a licensed TRY anchor is the go/no-go
Argentina	219.9% (2024)	Koywe · API in 1–2 weeks (published)
Bolivia	19.5% (2025)	Koywe · API in 1–2 weeks (published)

Before mainnet we pick the anchor: licensed, pays your own bank account, confirms in writing that a non-custodial app can integrate. Türkiye if a TRY anchor qualifies; otherwise Argentina on Koywe. Same app either way.

Inflation: World Bank, consumer prices, annual %, 2025 (Argentina 2024, latest published). Anchors and integration times as published on the SCF Integration List, on/off-ramping section, read 6 September 2026.

Users and transactions, all on chain.
